SERVICES PAGE

Technology services built around your business.

From high-performing websites and mobile applications to custom business systems, AI automation, and ongoing technical support, Elyntro turns ideas and operational challenges into reliable digital solutions.

CTA BUTTON Discuss Your Project | Secondary: Explore Business Solutions

Website Development

We design and develop fast, responsive websites that communicate your value clearly, strengthen your credibility, and help turn visitors into customers.

What we deliver

1. Corporate and service websites
2. Responsive UI/UX across all devices
3. Content management and admin dashboards
4. SEO, performance, and analytics foundations

Result: A professional digital presence designed to grow with your business.

Mobile App Development

We build intuitive mobile applications for iOS and Android that connect your customers, employees, and operations wherever they are.

What we deliver

5. Cross-platform mobile applications
6. User experience and interface design
7. Backend, API, and database integration
8. Testing, deployment, and release support

Result: A reliable mobile experience that makes your services easier to access and use.

Custom Business Systems

When off-the-shelf software cannot support your workflow, we build a system around the way your business actually operates.

What we deliver

9. CRM and operations management systems
10. Internal portals and admin dashboards
11. Approvals, permissions, and automated workflows
12. Reporting, integrations, and data migration

Result: One connected system that reduces manual work and gives your team better control.

Landing Page Development

We create focused landing pages for products, services, campaigns, and new business launches—designed to capture attention and encourage action.

What we deliver

13. Conversion-focused page structure
14. Responsive design and development
15. Contact forms, WhatsApp, CRM, and analytics integration
16. Performance and SEO optimization

Result: A focused, high-performing page built to generate leads and support your campaigns.

AI & Workflow Automation

We help businesses automate repetitive work, connect disconnected tools, and use AI where it creates real operational value.

What we deliver

17. Business process and automation analysis
18. AI assistants and intelligent workflows
19. n8n, API, and system integrations
20. Document processing, notifications, and data synchronization

Result: Faster operations, fewer manual tasks, and more time for meaningful work.

Technical Consulting & Support

We provide practical technical guidance to help you make confident decisions, solve problems, and choose the right technology for your business.

What we deliver

21. Technology and architecture recommendations
22. Technical audits and troubleshooting
23. Integration and deployment guidance
24. Project planning and technical roadmaps

Result: Clear technical direction without unnecessary complexity.

Maintenance & Continuous Improvement

Launching a solution is only the beginning. We keep your website, application, or business system secure, stable, and ready to evolve.

What we deliver

- 25. Bug fixes and software updates
- 26. Performance and security monitoring
- 27. Backups and deployment management
- 28. Feature improvements and ongoing support

Result: A dependable digital product that continues performing as your business grows.

How we work

- 29. **Understand** — We learn about your goals, customers, current processes, and technical requirements.
- 30. **Plan** — We define the solution, scope, priorities, timeline, and delivery approach.
- 31. **Build** — We design and develop in clear stages, with regular updates and opportunities for feedback.
- 32. **Launch & Improve** — We deploy, document, support, and continuously improve the solution when required.

Have an idea—or a process that needs improving?

Tell us what you want to build, fix, or automate. We will help you identify the right approach and define a practical next step.

BUSINESS SOLUTIONS

Proven platforms, tailored to how your business works.

Elyntro implements, customizes, integrates, and supports powerful business platforms. We help organizations replace disconnected tools and manual processes with solutions built around their real operations.

CTA BUTTON Find the Right Solution

Odoo Community ERP

A flexible, open-source ERP platform that brings essential business operations together in one connected environment.

We help businesses plan, implement, and customize Odoo Community according to their processes and growth requirements.

What we deliver

33. Business process analysis and ERP planning
34. Installation, configuration, and module setup
35. Custom modules, workflows, reports, and integrations
36. Data migration, user training, and ongoing support

Business outcome: Better visibility, less duplicated work, and one system connecting your core operations.

Microsoft Power Apps

Custom business applications built within the Microsoft ecosystem to digitize processes and improve employee productivity.

We develop Power Apps that connect with your existing Microsoft services and business data, helping teams replace spreadsheets, emails, and manual forms.

What we deliver

37. Internal business and field applications
38. Digital forms, approvals, and operational dashboards
39. SharePoint, Microsoft 365, Dataverse, and SQL integration
40. Workflow automation and ongoing application support

Business outcome: Faster digital transformation using tools that already fit your Microsoft environment.

n8n Workflow Automation

Flexible workflow automation that connects your applications, databases, APIs, and AI services.

We design reliable n8n workflows that remove repetitive tasks and keep information moving automatically between your systems.

What we deliver

41. Workflow and process automation
42. API, webhook, database, and application integrations
43. AI-assisted and document-processing workflows
44. Monitoring, error handling, documentation, and support

Business outcome: Fewer manual handoffs, faster processes, and more consistent operations.

ERPNext by Frappe

An open-source ERP solution for managing accounting, sales, purchasing, inventory, projects, employees, and other core business operations.

We configure and customize ERPNext to match your organization's structure, processes, reporting needs, and future growth.

What we deliver

45. Requirements analysis and ERP implementation
46. Module configuration and workflow customization
47. Custom forms, reports, permissions, and integrations
48. Data migration, training, deployment, and support

Business outcome: A centralized and adaptable business system without the complexity of disconnected software.

Our implementation approach

- 49. **Discover & Map** — We study your current processes, challenges, users, and existing systems.
- 50. **Configure & Customize** — We configure the selected platform and develop the functionality your business requires.
- 51. **Integrate & Migrate** — We connect existing tools and carefully migrate the required business data.
- 52. **Launch & Support** — We test the solution, train users, manage deployment, and provide ongoing support.

Not sure which platform is right for you?

Tell us about your business processes, existing tools, challenges, and goals. We will help you compare the available options and recommend the most practical solution.

Product naming

Use these product names consistently across navigation, cards, page titles, metadata, and image alt text:

- 53. Odoo Community ERP
- 54. Microsoft Power Apps
- 55. n8n Workflow Automation
- 56. ERPNext by Frappe

Important: Say that Elyntro implements these platforms. Do not claim official or certified partner status unless it has been formally confirmed.

HOMEPAGE RECOMMENDATION

Make the offer understandable in three seconds.

Keep the homepage concise. Use three broad service categories, then send visitors to the detailed Services and Solutions pages.

- 57. **Web & Mobile Development** — Websites, landing pages, and mobile applications.
- 58. **Business Systems & ERP** — Custom systems, Odoo Community, Microsoft Power Apps, and ERPNext.
- 59. **AI Automation & Ongoing Support** — n8n workflows, AI automation, technical consulting, and maintenance.

Linking rule: Each homepage card should link directly to the matching section of the Services or Solutions page.

Suggested homepage service intro

From customer-facing digital experiences to the systems and automations behind your operations, Elyntro builds practical technology that helps your business move faster and grow with confidence.

Recommended navigation

- 60. Home
- 61. Services
- 62. Solutions
- 63. About
- 64. Contact

WEBSITE IMPROVEMENT PRIORITIES

Build trust before adding more visual effects.

The current visual foundation is clean and premium. The highest-value improvements are clearer positioning, honest proof, stronger conversion paths, and better readability.

Priority 1 — Credibility and accuracy

- 65. **Remove unverified numbers:** Do not use claims such as “50+ Projects,” “98% Client Satisfaction,” “12+ Industries,” or “24/7 Support” unless they are completely true. If they describe previous individual experience, label them honestly as combined team experience.
- 66. **Replace placeholder contact details:** Add the real Jordanian phone number, a WhatsApp link, the correct email address, and “Amman, Jordan” if appropriate. Make the email and phone number clickable.
- 67. **Remove unsupported delivery claims:** Keep timelines such as “4–6 weeks” or “8–24 weeks” only if they reflect the real delivery model. Otherwise state that the timeline is defined after discovery.
- 68. **Use real proof:** Add two or three case studies that explain the problem, solution, technologies, and result. Previous team work can be presented as experience delivered by the team, not as Elyntro company projects.

Priority 2 — Conversion and usability

- 69. **Improve the contact form:** Add a Project Type field with Website, Mobile App, Custom System, ERP, Automation, Maintenance, and Consulting. Optional budget and expected timeline fields can help qualify leads.
- 70. **Improve scroll animations:** Avoid blurred content or large blank spaces before sections become visible. Keep motion subtle, support prefers-reduced-motion, and ensure essential content is visible even if animation fails.
- 71. **Increase body-text contrast:** Use a slightly brighter gray for paragraphs on the dark background so visitors can read comfortably without changing the brand identity.
- 72. **Keep calls to action specific:** Prefer action-led labels such as “Discuss Your Project,” “Book a Solution Consultation,” or “Explore Business Solutions” over generic labels such as “Learn More.”

Priority 3 — Technical quality and discoverability

73. **Correct technology names:** Use “NestJS” instead of “Nest” and “Three.js” instead of “3D JS.”
Add mobile technologies only if Elyntro genuinely uses them.
74. **Add dedicated SEO pages:** Create focused pages such as /services/web-development, /services/mobile-app-development, /solutions/odoo-community, and /solutions/erpnext. Add canonical URLs using elyntro.com after the domain is connected.
75. **Write descriptive metadata:** Give every main page a unique title and meta description that clearly names the service, platform, and market served.
76. **Optimize media:** Compress images, serve modern formats, lazy-load below-the-fold assets, and avoid autoplay effects that delay the first meaningful content.

Recommended next content additions

77. Two or three honest case studies
78. A short FAQ on scope, timelines, ownership, support, and payments
79. A clear About page explaining why Elyntro exists and how the team works
80. A simple maintenance and support plan comparison
81. Dedicated pages for the highest-priority services and platform solutions

Best next move: Update the Services and Solutions pages first, then revise the homepage cards and contact form. This creates one clear path from discovery to inquiry.
